Tactical Intelligence
TGW Physical Plan

REF: ESI No. 4

1. Photographs of the transmitter installation of station TGW are urgently needed. These should comprise the transmitting building and the three antenna towers. It is realized that security problems will arise, but it is anticipated that a manner will be found for taking these pictures without arousing suspicions. We need, if possible, photographs from all four sides, in order that we may have a clear idea of the physical plan of the structures and the nature of the approaches from all sides. Also desired is a sketch showing the interior of the building. In the event no excuse can be found for entering the building, it is probable that some informant will have a fairly accurate idea of the layout.
2. It is planned to blow these towers, and for this reason we require as much detailed information as possible regarding the nature of the supports and the foundation. A close-up of the base of the largest tower would be of value.
3. It is requested that this material be pouched to LINCOLN as soon as it can be obtained.
